

Opportunities with Wildlife Conservation Society-India Program

We have some exciting opportunities to work in our ongoing and new research programs in different parts of South India, which have commenced in October 2011. The scope of the project will broadly involve monitoring the distribution and abundance of prey-predator populations and threats to their habitats using cutting-edge tools.

We are looking for young and highly motivated individuals capable of carrying out field research work independently under the overall supervision and guidance of our Senior Program Staff. The aspiring candidates must be physically fit and willing to put long and arduous working hours in the field. The position will require investing substantial amount of time in the field at a stretch (6 - 8 months) and will be responsible for the successful and timely implementation of projects at different field sites. Preference will be given to candidates with driving skills and prior field experience.

Remuneration is in commensurate with qualification and experience. A bachelor degree in any discipline is desirable, although we encourage all candidates with a proven track record of interest in wildlife, to apply for this position irrespective of their educational background and qualification.

If you are interested in further exploring this opportunity, please send your bio-data to Narendra Patil at narendra.patil.cws@gmail.com immediately with all relevant details.

Those who have already applied for this position during the past 12 months need not apply again.
